

Q-1 Create application which create one custom pipe named as MyRev. This custom pipe accept string as value and display the string in reverse format

Q-2 Create an Angular Application which create two custom pipe named as MyAdd and MyMulti. MyAdd is used to add two numbers and MyMulti is used to multiply two numbers.

Q-3 Create an Angular Application which create one custom pipe named as MarvellousChk. This customepipe accept the value and parameter can be Prime,Perfect,Even,Odd.
Depends on parameter we have to check status of the number and return the result accordingly.
